    -I- FUNCTION: This protein may be involved in the oncogenic potentia
    of this virus (associated with cancer of the uterine cervix).
    -I- SUBCELLULAR LOCATION: Nuclear matrix-associated (By similarity).

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Curr. Has transforming activity. Inactivates, with E6-AP ubiquitin-protein ligase, the human TP53/p53 tumor suppressor protein by targeting it to degradation. Binds and targets human MUPP1/MPDZ protein to degradation. Those two functions presumably contribute to transforming activity (By similarity). Interaction with human FBLN1 protein also seems to be linked to cell transformation. SUBUNIT: Forms a complex with E6-AP ubiquitin-protein ligase which interacts with human P53. Binds to human FBLN1 and MPDZ (By
